

 Outside window
  Edges of the snapshot
  Round being predicted
  Not yet played

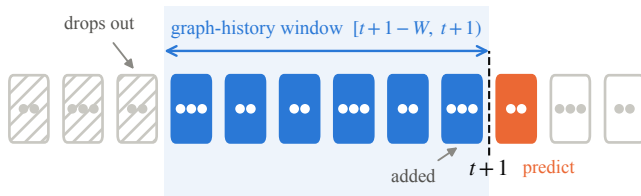

(a) Step t : build G_t from the window, predict the current round

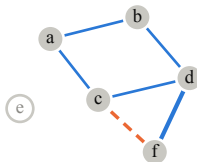

G_t

(b) Step $t+1$: add the completed round, slide the window

G_{t+1}

Boxes: tournament-round blocks in chronological order; dots: matches. Right: snapshot graphs. Dashed orange: pair being predicted, whose players are nodes even without a match in the window (f in G_t). In G_{t+1} the match a-e has aged out, so e leaves the graph (hollow).
